

# Triggering Conditions and Data Quality Traffic Jam

**CAR 2 CAR Communication Consortium** 

# About the C2C-CC

Enhancing road safety and traffic efficiency by means of Cooperative Intelligent Transport Systems and Services (C-ITS) is the dedicated goal of the CAR 2 CAR Communication Consortium. The industrial driven, non-commercial association was founded in 2002 by vehicle manufacturers affiliated with the idea of cooperative road traffic based on Vehicle-to-Vehicle Communications (V2V) and supported by Vehicle-to-Infrastructure Communications (V2I). Today, the Consortium comprises 73 members, with 12 vehicle manufacturers, 33 equipment suppliers and 28 research organisations.

Over the years, the CAR 2 CAR Communication Consortium has evolved to be one of the key players in preparing the initial deployment of C-ITS in Europe and the subsequent innovation phases. CAR 2 CAR members focus on wireless V2V communication applications based on ITS-G5 and concentrate all efforts on creating standards to ensure the interoperability of cooperative systems, spanning all vehicle classes across borders and brands as well as other road users. As a key contributor, the CAR 2 CAR Communication Consortium works in close cooperation with the European and international standardisation organisations such as ETSI and CEN.

'*Vehicle speed*' is the length of the velocity-vector of the reference position point.

#### **Triggering conditions** 3

#### 3.1 Traffic Jam

#### 3.1.1 Traffic jam - dangerous end of gueue

#### 3.1.1.1 Description of cooperative intelligent transport systems (C-ITS) service **Other (informational)**

This C-ITS service transmits vehicle-to-vehicle (V2V) information on a situation where an ego vehicle detects the end of a traffic jam ('dangerous end of queue'). Such a situation exists, when the traffic lane of the ego vehicle is blocked and the vehicle cannot proceed in its lane. Urban environment is not considered in this service.

To distinguish this C-ITS service from other C-ITS services, the triggering conditions in section 3.1.1.2 define how the end of a traffic jam exactly looks like.

#### **Other (informational)**

The following C-ITS services are related to this service, because they share similar triggering conditions:

'dangerous situations - electronic emergency brake light'. •

#### 3.1.1.2 Triggering conditions

#### 3.1.1.2.1 Preconditions

#### Requirement

The following preconditions shall be satisfied when this use case is triggered:

1. the eqo vehicle is located in a non-urban environment, as determined in at least one of the following ways:

1.1. the velocity is greater than 80 km/h for a time block of at least 30 s in the 60 s prior to each detection and the absolute value of the steering wheel angle is less than 90 ° for a time block of at least 30 s in the 60 s prior to each detection ('dangerous end of queue' should not be detected in a non-motorway environment);

1.2. an on-board camera sensor indicates non-urban environment;

1.3. an on-board digital map indicates non-urban environment.

Note: PTW do not use the steering wheel angle recognizing the non-urban environment (steering wheel angle is always treated as being  $<90^{\circ}$ ).

Tested by:

#### Requirement

The velocity and angle values shall be measured continuously. The conditions shall be satisfied throughout the measurement duration. The process shall start over again if the conditions are not satisfied within measurement duration.

Tested by:

#### 3.1.1.2.2 Service-specific conditions

#### RS tcTrJa 149

#### RS tcTrJa 96

#### RS tcTrJa 94

#### Requirement

#### RS\_tcTrJa\_105

If the preconditions in RS\_tcTrJa\_94 and at least one of the following conditions are satisfied, the triggering conditions for this C-ITS service are fulfilled and the generation of a Decentralised Environmental Notification Message (DENM) shall be triggered:

- TRCO\_0 AND (TRCO\_2 OR TRCO\_3 OR TRCO\_4 OR TRCO\_5 OR TRCO\_6)
- TRCO\_1 AND TRCO\_2.

#### Table 4: 'Traffic jam — dangerous end of queue' service-specific conditions

Count	Triggering condition (TRCO)	Status
TRCO_0	initial to target velocity of 30 km/h or less. The duration between initial and target velocity shall be 10 s or less. An instant deceleration between initial and target velocity exceeding -3.5 m/s <sup>2</sup> is detected.	driver reaction
TRCO_1	Passengers of the ego vehicle react to the traffic jam by enabling hazard lights for at least 3 s	driver reaction
TRCO_2	<ul><li>an on-board camera sensor; or</li><li>CAMs.</li></ul>	environment or on-board sensors
TRCO_3	At least one DENM corresponding to the 'Traffic jam - <i>Dangerous end of queue</i> ' C-ITS service has been received.	environment
TRCO_4	At least five different DENMs (i.e. with different <i>actionIDs</i> ) corresponding to the ' <i>traffic jam - traffic jam ahead</i> ' C-ITS service have been received from the downstream traffic.	environment
TRCO_5	At least one DENM corresponding to the 'Special vehicle warning - Static safeguarding emergency vehicle' C-ITS service has been received, with linkedCause equal to Traffic Condition or Dangerous End of Queue.	environment
TRCO_6	On-board sensors of the ego vehicle recognise that the vehicle is facing a dangerous end of queue.	on-board sensors

#### Requirement

#### RS\_tcTrJa\_151

A new DENM shall not be requested within the *Detection Blocking Time*. The *Detection Blocking Time* is launched after the event is detected and a DENM to that effect has been requested. In this way, a single event is not able to flood the transmission channel. The *Detection Blocking Time* shall be 60 s no matter how the event is detected. The detection period between two detected events shall be at least equal to the *Detection Blocking Time*. The detection algorithm may run during *Detection Blocking Time*.

Note: No period for the braking manoeuvres is presented, because the initial ego vehicle velocity has no upper restriction.

Tested by:

A condition shall be valid as long as it is active and for an extra period of 5 s (the period increases the determinism of the detection algorithm). The validity shall decrease from the moment the condition is no longer satisfied, thus facilitating the combination of triggering conditions.

Tested by:

#### Requirement

#### RS\_tcTrJa\_108

CAMs and DENMs from remote vehicles used for evaluating service specific conditions as described above shall be relevant for the ego vehicle. The relevance shall be determined in one of these ways:

a) a digital map indicates that the event and the ego vehicle are separated by a distance of less than 500 m and share the same driving direction;

b) a path history match indicates that the event and the ego vehicle are separated by a distance of less than 500 m and share the same driving direction;

c) the Euclidean distance between the event and the ego vehicle is less than 500 m and the absolute value of the heading difference is less than 10 °. The traffic jam reference positions according to the DENMs are located in an area spanning from -45 ° to +45 ° starting at the ego vehicle's longitudinal axis.

Note: When counting vehicles or events, Authorization Ticket (AT) change should be considered in such a way that no vehicle or event is counted multiple times.

Tested by:

#### 3.1.1.2.3 Information quality

#### Requirement

#### RS\_tcTrJa\_109

The value of the data element *informationQuality* in the DENM depends on how the situation is detected. TRCOs (see RS\_tcTrJa\_105) are divided into groups: driver reaction, vehicle dynamics, environment and on-board sensors. The *informationQuality* value shall be set according to the following table. The highest possible value shall be used.

Event detection	Value of InformationQuality
No TRCO compliant implementation	unknown(0)
At least one TRCO from the driver reaction AND environment group is fulfilled.	1
At least one TRCO from the driver reaction AND on-board sensors group is fulfilled.	2
At least one TRCO from the driver reaction AND environment AND on-board sensors group is fulfilled.	3
Tested by:	

#### Tested by:

#### 3.1.1.3 Termination conditions

A termination of the C-ITS service shall not be considered.

Tested by:

# 3.1.1.3.1 Cancellation

Requirement A cancellation DENM shall not be used for this C-ITS service. Tested by:

# 3.1.1.3.2 Negation

Requirement A negation DENM shall not be used for this C-ITS service. Tested by:

#### 3.1.1.4 Update

Requirement RS\_tcTrJa\_113 An update DENM shall not be used for this C-ITS service. Tested by:

## 3.1.1.5 Repetition duration and repetition interval

#### Requirement

New DENMs shall be repeated for a repetitionDuration of 20 s with a repetitionInterval of 0.5 s.

Therefore, the interface parameters Repetition duration and Repetition interval between the application and the Decentralised Environmental Notification (DEN) basic service shall be set according to the above values.

Note: Where two DENMs with the same causeCode originate from the same C-ITS station, the case shall be managed by the receiving C-ITS station.

Tested by:

## 3.1.1.6 Traffic class

Requirement New DENMs shall be set to *traffic class* 1. Tested by:

#### 3.1.1.7.2 Cooperative Awareness Message (CAM)

#### Requirement

CAM adaption shall not be used for this C-ITS service.

Tested by:

#### 3.1.1.8 Networking and transport layer

#### Requirement

The interface parameter *DENM destination area* between the DEN basic service and the networking and transport layer shall be equal to a circular shape with radius equal to *relevanceDistance*.

Tested by:

#### 3.1.1.9 Security layer

#### Requirement

If the triggering conditions are fulfilled as described in section 3.1.1.2, an AT change shall be blocked for new DENMs as long as the *validityDuration* has not expired (see RS\_tcTrJa\_116).

RS\_tcTrJa\_117

#### RS\_tcTrJa\_118

RS\_tcTrJa\_120

Corresponding new DENMs shall be sent with the same AT.

Tested by:

#### 3.1.1.10 Scenarios

#### Other (informational)

RS\_tcTrJa\_152

This section has an informational character and is not part of the requirement specification. The following list encompasses scenarios which are regarded as relevant or irrelevant considering the present use case:

Count	Description	Status
SC_0	A towing maneuver consisting of two vehicles both with enabled hazard lights no matter whether stationary or moving.	Irrelevant
SC_1	A braking maneuver due to a red traffic light.	Irrelevant
SC_2	Freeway.	Relevant
SC_4	The ego vehicle is arriving at the end of a traffic queue. Other vehicles have hazard lights enabled to notify inbound traffic. Passengers of the ego-vehicle react by enabling hazard lights.	Relevant
SC_5	The ego vehicle is standing still at the end of a traffic queue with no vehicles behind. Hazard lights of the ego vehicle may be enabled.	Relevant
SC_6	The ego vehicle is performing a braking maneuver due to the end of a traffic queue. Hazard lights of the ego vehicle may be enabled.	Relevant
SC_6	Traffic on a different road.	Irrelevant
SC_7	Traffic in the opposite driving direction.	Irrelevant
SC_8	Other vehicles than passenger cars and PTWs.	Irrelevant
SC_9	Using hazard lights for 'saying sorry'.	Irrelevant

#### Table 7: 'Traffic jam — dangerous end of queue' scenarios

#### 3.1.2 Traffic jam - traffic jam ahead

#### 3.1.2.1 Description of C-ITS service

#### Other (informational)

This C-ITS service transmits V2V information on a situation where an ego vehicle detects a traffic jam. Such a situation exists if the ego vehicle is surrounded by stationary traffic or a heavy volume of traffic. This service does not apply to urban environments.

It is important that a traffic jam shall be detected only in appropriate situations. All other situations though related with this C-ITS service or not, shall not be detected. To distinguish this C-ITS service from other C-ITS services, the triggering conditions in section 3.1.2.2 define how a traffic jam exactly looks like.

#### Other (informational)

The following C-ITS services are related to this service, because they share similar triggering conditions:

# RS tcTrJa 155

RS\_tcTrJa\_121

- 'stationary vehicle warning stopped vehicle';
- 'stationary vehicle warning broken-down vehicle';
- 'stationary vehicle warning post-crash';
- 'special vehicle warning stationary recovery service warning'.

#### 3.1.2.2 Triggering conditions

#### 3.1.2.2.1 Preconditions

#### Requirement

The following preconditions shall be satisfied when this use case is triggered:

- 1. no 'stationary vehicle warning' service is detected;
- 2. no 'special vehicle warning' service is detected;

3. the ego vehicle is located in a non-urban environment. The location shall be determined in at least one of these ways:

3.1. the velocity is greater than 80 km/h for a time block of at least 30 s in the 180 s prior to each detection and the absolute value of the steering wheel angle is less than 90 ° for a time block of at least 30 s in the 60 s prior to each detection (traffic jams should not be detected on motorways);

3.2. an on-board camera sensor indicates non-urban environment;

3.3. an on-board digital map indicates non-urban environment.

Note: PTW do not use the steering wheel angle recognizing the non-urban environment (steering wheel angle is always treated as being <90°).

Tested by:

#### Requirement

The velocity and angle values shall be measured continuously. The conditions shall be satisfied throughout the measurement duration. The process shall start over again if the conditions are not satisfied within measurement duration.

Tested by:

#### 3.1.2.2.2 Service-specific conditions

#### Requirement

If the preconditions in RS\_tcTrJa\_122 and at least one of the following conditions are satisfied, the triggering conditions for this C-ITS service are fulfilled and the generation of a DENM shall be triggered.

- TRCO\_0;
- TRCO\_1 AND (TRCO\_2 OR TRCO\_3 OR TRCO\_4 OR TRCO\_5)

#### Table 8: 'Traffic jam — traffic jam ahead' service-specific conditions
